

Anupama C Y

Davangere, Karnataka, India | anupamayavaraj05@gmail.com | +91-9148187399 | [LinkedIn](#)

Professional Summary

Software Developer and Data Analyst with proven expertise in developing scalable REST APIs, interactive dashboards, and machine learning models. Proficient in Python, JavaScript, Flask, FastAPI, MySQL, MongoDB, and Power BI. Specialized in building responsive web applications, statistical analysis, and real-time anomaly detection systems. Cloud deployment experience on Google Cloud Platform (GCP). Strong background in Agile development methodologies and business intelligence solutions. Committed to delivering high-impact, data-driven results with optimized system performance.

Education

Bachelor of Engineering in Computer Science Jain Institute of Technology, Davangere, Karnataka CGPA: 8.06 / 10.00	2022 – Present
Pre-University (PCMB) Sri Siddaganga PU College, Davangere, Karnataka Percentage: 83.77%	2020 – 2022
Secondary School Sri Siddaganga Composite High School, Davangere, Karnataka Percentage: 88.16%	2020

Projects

Hotel Management System

- Developed a web-based Hotel Management System using Python (Flask), MySQL, and HTML/CSS, featuring room booking, customer management, billing and role-based access for Admin and Staff.
- Implemented responsive UI with HTML/CSS/JavaScript and hosted locally using XAMPP's Apache and MySQL for testing and deployment.

Patient Monitoring System using ML [Real-Time Alerts]

- Engineered a machine learning-based patient monitoring system to analyze real-time health data and detect anomalies, including sudden drops in vitals such as heart rate and oxygen levels.
- Integrated an automated alert system to call emergency services or notify caregivers upon detection of critical health conditions using threshold-based logic and ML predictions.

AI-Powered Voice Cloning System

- Engineered ML-powered patient monitoring system analysing real-time health data to detect critical anomalies including sudden drops in heart rate and oxygen levels with 94% detection accuracy.
- Implemented few-shot voice replication via model fine-tuning and generated high-quality waveforms using WaveGlow/Vocoder backends, enhancing speech synthesis accuracy and efficiency.

Technical Skills

Programming Languages: C, Python, HTML, CSS, Java, SQL, Machine Learning (ML), Artificial Intelligence (AI)

Developer Tools & Platforms: Visual Studio Code (VS Code), Google Cloud Platform (GCP), Jupyter Notebook, Git, GitHub

Technology/Framework: Flask, FastAPI, Bootstrap, RESTful APIs, Responsive Web Design, Database Management Systems (DBMS)

Data Analysis & Visualization Tools: Power BI, Microsoft Excel, Statistical Analysis, Dashboard Creation, Data Visualization

Certifications

- NPTEL – Joy of Computing using Python
- Unix/Linux Fundamentals - Infosys Springboard
- Artificial Intelligence (AI & ML) - Infosys Springboard
- Web Development Masterclass – Udemy

Achievements & Awards

- Awarded Best Team Project - College-level competition for innovation and collaboration in group project, receiving prize money
- Finalist (Top 100 Teams) - FOSS Hackathon demonstrating strong problem-solving, teamwork, and innovation capabilities
- Event Coordinator - Hackathon at Emerge 2K25 (Jain Institute of Technology) Successfully managed event logistics, participant coordination, and schedule execution for 200+ participants
- Multiple Hackathon Participations - Enhanced problem-solving, collaboration, and competitive programming skills through various hackathons and contests

Extracurricular & Leadership

- Event Coordinator - Emerge 2K25 Hackathon (Jain Institute of Technology) Managed logistics, participant coordination, and scheduling for 200+ participants
- Active Participant - Multiple Hackathons & Competitive Programming Contests Demonstrated collaboration, problem-solving, and technical depth
